Quality coverage: 12.5 in Q20.

* NOTE: This is a 'working draft' sequence. It currently consists of 2 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is balieved to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

* This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* 2033 2132: gap of 100 bp

* 2033 2132: gap of 100 bp

* 11708: contig of 139576 bp in length.

It currently consists of 41 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 31 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

requests: clonerequest@sanger.ac.uk
on Oct 1, 2000 this sequence version replaced gi:8247074.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em: FMBL; Sw: SMISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
has been finished according to sequence map criteria as follows.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AL136969 79666 bp DNA PRI 11-APR-2001 Human DNA sequence from clone RP1-207J11 on chromosome 7 Contains ESTs and STSs. Contains two zinc finger protein pseudogenes, a putative novel gene and an HNRPC (heterogeneous nuclear ribonucleoprotein C (C1/C2)) pseudogene, complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Eukaryota, Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

```
An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annoctated repeat sequence elements. Where the sequence is annotation using the 'unsure' feature key. RP1-207J11 is from the library RPCI-1 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm vECTOR: pcYPAC2
IMPORTANT: This sequence is the entire insert of clone RP1-207J11 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap. The true left end of clone RP1-207J11 is at 1 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               / 0063. .5395 / Orde="Link8 repeat: matches 4441. .5788 of consensus" 5621. .5904 / Orde="Link8 repeat: matches 12. .309 of consensus" 5621. .5905. .6560 / Orde="BURI repeat: matches 10970. .11628 of consensus" 6612. .6866 / Orde="BURI repeat: matches 10970. .11628 of consensus" 6614. .6869 / Orde="BURI repeat: matches 10733. .10985 of consensus" / Orde="MER93 repeat: matches 268. .371 of consensus" / Orde="Alug repeat: matches 1. .296 of consensus" / Orde="Alug repeat: matches 1. .268 of consensus" / Orde="MER93 repeat: matches 1. .268 of consensus" / Orde="BURI repeat: matches 1. .268 of consensus" / Orde="BURI repeat: matches 9897. .10662 of consensus" / Orde="BURI repeat: matches 9897. .10

It currently consists of 12 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. * This record will be updated with the finished sequence * as soon as it is available and the accession number will * be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

Submitted (12-JUN-2000) Genome Sequencing Center, Washington
University School of Medicine, 4444 Forest Park Parkway, St. Louis,
MM 63108, USA.
On Aug 7, 2000 this sequence version replaced gi:9653223.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTE: This is a 'working draft' sequence. It currently consists of 21 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:

STSS are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (GNC. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Feprits of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.

It currently consists of 2 conflags. The true order of the pieces and thouse and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                MO 63108, USA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Submitted (07-APR-2001) Sanger Centre, Hinxton, Cambridgeshire, Caudmisted (07-APR-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 15A, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerquest@sanger.ac.uk
On Apr 8, 2001 this sequence version replaced gi:13366339.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either duble stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality) as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em; EMBL; Sw; SWISSRROT; Tr:, TREMBL; WP: WORMPEP; Information on the WORMPEP database can be found at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               http://www.sanger.ac.uk/RGP/Chr9
RP11-507D14 is from the library RPCI-11.2 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm
http://www.chori.org/bacpac/home.htm
VECTOR: pBAGe3.6
IMPORTANT: This sequence is not the entire insert of clone RP11-507D14 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.
The true left end of clone RP11-507D14 is at 1 in this sequence. The true left end of clone RP11-299M1 is at 11585 in this sequence. The true right end of clone RP11-299M1 is at 131585 in this this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Chordata; Craniata; Vertebrata; Euteleostomi;

It currently consists of 9 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as truns of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                74427 74591: gap of 100 bp 111 length 17492 103412: contig of 28821 bp in length 103413 103512: gap of 100 bp 103513 10352: contig of 4540 bp in length 10853 108152: gap of 100 bp 10853 108152: gap of 100 bp 129521 129520: contig of 4348 bp in length 129521 129520: gap of 100 bp 129521 133362: contig of 3742 bp in length 133363 133462: gap of 100 bp 100 bp 100 bp 133462: gap of 100 bp 100 bp 100 bp 133462: gap of 100 bp 100 bp 100 bp 100 bp 133462: gap of 100 bp 10

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             * NOTE: This is a 'working draft' sequence. It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is a runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2051 2150; gap of 100 bp 2051 bp in length 2051 2150; gap of 100 bp 2051 2150; gap of 11023 bp in length 13174 13773; gap of 1100 bp 3822 38213; gap of 100 bp 38322 38321; gap of 100 bp 38322 38321; gap of 100 bp 38322 38321; gap of 100 bp 78430 94546; contig of 40008 bp in length 7830 78429; gap of 100 bp 78430 94546; contig of 16117 bp in length 94647 102356; contig of 7710 bp in length 102357 102456; gap of 100 bp 100 bp 102357 102456; gap of 100 bp 100 bp 102357 102456; gap of 100 bp 100 bp

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Submitted (19-NOV-1998) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerquest@sanger.ac.uk
On Sep 30, 1998 this sequence version replaced gi:3646060.
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
This sequence is the entire insert of clone 281H8. This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 HS281H8 110414 bp DNA PRI 23-NOV-1999
Human DNA sequence from clone 281H8 on chromosome 6q25.1-25.3.
Contains up to four novel genes, one with similarity to KIAA0323
and worm C30F12.1 and another with Ubiquitin-Like protein gene SMT3
(the latter in an introm of a novel gene). Contains ESTs, STSs,
GSSs, a putative CpG island and genomic marker D6S1553, complete
                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          contigs of

Direct Submission

L Submitted (09-MAR-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 15A, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

On Dec 4, 2000 this sequence version replaced gi:9795179.

During sequence assembly data is comparad from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Ems., EMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WORMPEP Information on the WORWPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human decreases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence is the entire insert of clone RP1-28F12 The true left end of clone RP5-1076E17 is at 58615 in this sequence. The true right end of clone RP1-12201 is at 2837 in this sequence. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least
                                                                                                                                                                                                                                                                                                                                                                                            ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          HS28F12 120630 bp DNA PRI 18-MAR-2001
Human DNA sequence from clone RP1-28F12 on chromosome 20411.22-12
Contains part of the KIAA0823 gene, ESTs, STSs and GSSs, complete
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The true left end of clone 26H23 is at 1 in this sequence. The true right end of clone 130N4 is at 34585.
The true left end of clone 267P19 is at 91732.
26H23 is from the human PAC library described in Ioannou A.P. et al Nature Genet 6, 84-89.

An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence is not the entire insert of clone 26H23. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence has been finished according to sequence map criteria

Direct Submission

Submitted (26-FEB-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
requests: clonerquest@sanger.ac.uk

On Dec 3, 1999 this sequence version replaced gi:6522765.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, RBML; Sw.; SWISSROT; Tr:, TREMBL; Wp.; WORNPEP; Information on the WORNEP database can be found at their source databases:

on the WORNEP database can be found at the from part of bacterial clone contigs of human chromosome 20, constructed by the Sanger Centre Chromosome 20

Mapping Group. Further information can be found at the proposer ac.uk/MGY/Chr20

This sequence is the entire insert of clone RP4-800C24 The true left end of clone RP11-195M11 is at 77455 in this sequence. This sequence is the entire insert of clone RP4-800C24 The true left end of clone RP11-195M11 is at 37455 in this sequence. This sequence is the entire insert of clone RP4-800C34 as lone as compressions and repeats; all regions were enther double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as sometime with a sequence than one M13 subclone; and the assembly was confirmed by restriction digest. RP4-800C24 is from further than all the double or more than one M13 subclone; and the assembly was confirmed by the group of Pieter de Jong. For firther details and repeats. HSJ800C24 118150 bp DNA PRI 01-MAR-2001 Human DNA sequence from clone RP4-800C24 on chromosome 20 Contains an RPL12 (60S ribosomal protein L12) pseudogene, ESTs, STSs and Homo sapiens
Bukaryota: Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

requests: clonerequest@sanger.ac.uk

on Jun 19, 1999 this sequence version replaced gi:4582139.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations

together with a note of the overlapping clone name. Note that the

variation annotation may not be found in the sequence submission

corresponding to the overlapping clone, as we submit sequences with

only a small overlap as described above.

This sequence has been finished according to sequence map criteria

as follows. An attempt is made to resolve all sequencing problems,

such as compressions and repeats, but not necessarily within known

annotated human repeat sequence elements (e.g. Alu). Where the

feature of the contraction using the 'unsure'

feature.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chhl 69M21 is from the library RPC11 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. For further details see http://bacpac.med.buffalo.edu/ VECTOR: pCYPAC2 This sequence is the entire insert of clone 69M21. The true right end of clone 330012 is at 31830 in this sequence.
